❗ Note:

Prior to installing the MB601V4KW-B, please clean the case surface thoroughly, preferably using alcohol. This ensures the 3M adhesive adheres properly, providing essential water resistance. For the most effective waterproofing, apply the 3M adhesive in an environment with a temperature above 10°C. Keep in mind that peak adhesion is typically achieved within 72 hours post-application.

1. Remove the protective layer from the 3M adhesive and affix the MB601V4KW-B to your desired external 3.5" bay location on the case.

2. Insert the MB601V4KW-B into a 3.5" drive bay and secure it using the included M3*4 pan head screws.

3. Connect the 15-Pin SATA power and SATA 7-Pin cables to the MB601V4KW-B to complete the installation.

❗ Note:

- Please note that the water-resistant function applies only to the Tough-Cover of the MB601V4KW-B. The device itself does not have a water-resistant function. This design primarily prevents low-pressure water from entering the device through the Tough-Cover. To ensure proper installation, make sure the system chassis where the MB601V4KW-B is installed has a flat and smooth surface around the 3.5" bay. This prevents water from seeping into the device or system due to uneven surfaces.
- The water-resistant feature of the MB601V4KW-B is not permanent and may diminish over time.
- We recommend using a wide-temperature U.2/U.3 SSD with the MB601V4KW-B to ensure stable operation under extreme temperatures.
